

Description

Bambú's microfibre cleaning kits and swabs absorb humidity and grease rapidly and without leaving any residues. Microfibre acts as a magnet for dust, dirt and oils and absorbs much more than conventional fibres thanks to its woven filaments, which are 100 thinner than a human hair. This material does not scratch the instrument.

It cleans, polishes and burnishes the musical instrument with no need for chemical products.

Our line of cleaning swabs and kits has been designed with the objective of guaranteeing a perfect maintenance of the inside and the outside of the musical instrument.
